

Balloon Powered Bus

How far can your bus travel?

Materials:

- Balloons (I have my students tape the balloon to the straw because I'm always afraid of students choking on a balloon)
- Straw (for the power)
- Shoebox lid or Styrofoam food tray
- Wheels (lids with holes drilled into them, old CDs, or cut out cardboard circles)
- Masking Tape
- 2 Coffee Stirrers for the axles

Directions

Construct a school bus that is powered by a balloon. Use a shoe box lid or Styrofoam food tray as your base and wheels. Your bus will be powered by a balloon.
